## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-24, drawn to a method of detecting bacterial endospores, classified in class 435, subclass 7.2.
- II. Claims 25-31, drawn to a detection system, classified in class 435, subclass 173.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions of Group I and Group II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the detection method as claimed can be practiced by culturing and plating on an agar plate. Therefore the detection method and the device are patentably distinct.

Searching the inventions of Group I and II together would impose serious search burden. The inventions of Group I and II have a separate status in the art as shown by their different classifications. Moreover, in the instant case, the search for the method steps of the detection and the device are not coextensive. Search of Group II encompasses an optical detection and analysis device, which is not required for the search of Group I. As such, it would be burdensome to search the inventions of Group I and II together.

Art Unit: 1655

Because these inventions are distinct for the reasons given above, have acquired a separate status in the art as shown by their different classification, and the search required for one group is not required for the other group, restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit

Art Unit: 1655

evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.
